SUMMARY STATEMENT

I am currently working through a Diploma of back-end web development after completing my Diploma of front-end web development which has taught me numerous skills such as leadership, teamwork, communication, organisation and time management. This course has involved working with a client to create a website to their requirements, this involved having numerous meetings, collaborating with a team, working to requirements and delivering a product on time. My interest in this industry stems from a love of creating things and working with a client to help them succeed in their goals. The next step for me would be to join a collaborative team working with them to create websites that everyone is passionate and proud of.

EDUCATION & TRAINING

North Metropolitan TAFE

Diploma of Information Technology (Back-End Web Development)	06/2026 - 06/2027
Diploma of Information Technology (Front-End Web Development)	06/2025 - 06/2026

- Worked with languages such as HTML, CSS, JavaScript, PHP, SQL, XML, SCSS, Python, C#
- Competent in software's like Figma, Postman, cPanel, Visual Studio Code, Laragon

PROJECT EXPERIENCE

Library Project (<https://mytafespace.screencraft.net.au>)

06/2025 – 06/2026

This project entailed making a new website for the library at NMTafe that provided information that was easier to understand and more accessible compared to the old site. The goal of the was to benefit new students and particularly students who have accessibility requirements.

- Working and communicating with a client to find out what they want, keeping them informed throughout the process, and making sure that they are happy with the product.
- Making a Parent Theme in WordPress for the site, having to find ways to upload content that would dynamically update, finding a way to upload icons that would automatically link themselves to its corresponding article and figuring out a way that the whole team could collaborate on the code for the theme.
- Using Figma to create designs for the project that all team members and the client would agree on, making sure that the designs followed accessibility standards and had a good user experience.
- Uploading the site to the live server and testing all its functionality worked correctly.
- Making a comprehensive user manual for the client that documents every scenario and each task that they might need to do in the future.
